Priority number(s):

Abstract of JP6101105

PURPOSE: To obtain a readily deformable glovelike structure, capable of protecting hands in cooking, washing, etc., and useful for removing foreign materials by preparing a glovelike structural part from a water-impermeable and heat shielding material and providing a high-frictional surface in a surface having high adsorptivity for the foreign materials.

CONSTITUTION: This glovelike structure is obtained by forming high gripping structural parts capable of facilitating the deformation of a high-frictional structural part 2 on the surface and a glovelike structural part 1, constructing the glovelike structural part from a water-impermeable and heat shielding material and using a desired part of the glovelike structural part having high adsorptivity for foreign materials as a surface part of a high-frictional structure.
